

Product Features

- Compliant with IEEE Std 802.3-2005,1000BASE-BX-U
- Compliant with SFF-8074i andSFF-8472, revision 9.5
- Compliant with SFP MSA Specification
- Digital Diagnostic Monitoring available
- Uncooled 1310nm FP Laser
- Up to 1.25Gb/s bi-directional data links
- Up to 20km on 9/125μm SMF
- Simplex LC connector compliant
- Single +3.3V DC power supply
- Hot-pluggable CSFP footprint
- Class 1 laser safety certified
- Operating temperature Options
 - (Commercial) -10°C to +70°C
 - (Extended) -10°C to +85°C
 - (Industrial) -40°C to +85°C
- RoHS6 Compliant

Applications

- 1000BASE BX IEEE802.3ah
- Point to Point FTTH
- Switched Backplane Applications
- Router/Server Interface
- Switch to Switch Interface
- Other Optical Links

Descriptions

LX2501xDR CSFP transceivers, according to Compact Small Form Factor Pluggable Multi-Sourcing Agreement (MSA) option 2, The transceiver consists of 2-channel Bi-directional Optical Transceiver unit with five sections: the LD driver, the limiting amplifier, the digital diagnostic monitor, the 1310nm FP laser and the PIN photo-detector .The module data link up to 20KM in 9/125um single mode fiber. LX2501xDR CSFP transceivers offer a wide range of design options, including Digital Diagnostic Monitoring (DDM) features and three temperature options (commercial, extended or industrial). LX2501xDR CSFP are compliant with RoHS.

Pin Description

Table 2. Pin Description

Pin	Name	Function/Description	Notes
1	VEE	Transceiver Ground	VEE may be internally connected within the SFP module
2	TX Fault	Transmitter Fault Indication	TX Fault is an open collector/ drain output, which should be pulled up with a 4.7K–10K resistor on the host board. Note 1 for more information
3	TX1_Disable	Transmitter Disable of Ch A	Module channel A disables function
4	MOD-DEF2	Two-wires interface Data	2 wire serial ID interface, SDA
5	MOD-DEF1	Two-wires interface Clock	2 wire serial ID interface, SCL
6	TD2-	Inverted Transmit Data Input of Ch B	These are the differential transmitter puts. They are AC-coupled, differential lines with 100 differential termination inside the module. The AC coupling is done inside the module and is thus not required on the host board
7	TD2+	Transmit Data Input of Ch B	Loss of Signal detected function. Note 2 for more information.
8	LOS1	Loss of Signal of Ch A	These are the differential receiver outputs. They are AC coupled 100 differential lines which should be terminated with 100(differential) at the user SERDES. The AC coupling is done inside the module and is thus not required on the host board.
9	RD2+	Received Data Output of Ch B	VEE may be internally connected within the SFP module.
10	RD2-	Inverted Received Data Output of Ch B	These are the differential receiver outputs. They are AC coupled 100 differential lines which should be terminated with 100(differential) at the user SERDES. The AC coupling is done inside the module and is thus not required on the host board.
11	VEE	Transceiver Ground	These are the differential transmitter puts. They are AC-coupled, differential lines with 100 differential termination inside the module. The AC coupling is done inside the module and is thus not required on the host board.
12	RD1-	Inverted Received Data Output of Ch A	Loss of Signal detected function. Note 2 for more information.
13	RD1+	Received Data Output of Ch A	3.3V± 5%. Note 3 for more information
14	LOS2	Loss of Signal of CH B	3.3V± 5%. Note 3 for more information
15	VCCR	Receiver Power	Module channel B disables function
16	VCCT	Transmitter Power	These are the differential transmitter puts. They are AC-coupled, differential lines with 100 differential termination inside the module. The AC coupling is done inside the module and is thus not required on the host board
17	TX2_Disable	Inverted Transmit Data Input of Ch A	VEE may be internally connected within the SFP module.
18	TD1+	Transmit Data Input of Ch B	Low indicates normal operation. In the low state, the output will be pulled to < 0.8V.
19	TD1-	Inverted Received Data Output of Ch B	When high, this output indicates the received optical power is below the worst-case receiver sensitivity (as defined by the standard in use). Low indicates normal operation. In the low state, the output will be pulled to < 0.4V.
20	VEE	Transceiver Ground	VccT VccR are the power supplies. They are defined as 3.3V ±5% at the SFP connector pin. Maximum supply current is 400mA@3.3V. Vcc may be internally connected within the SFP transceiver module.

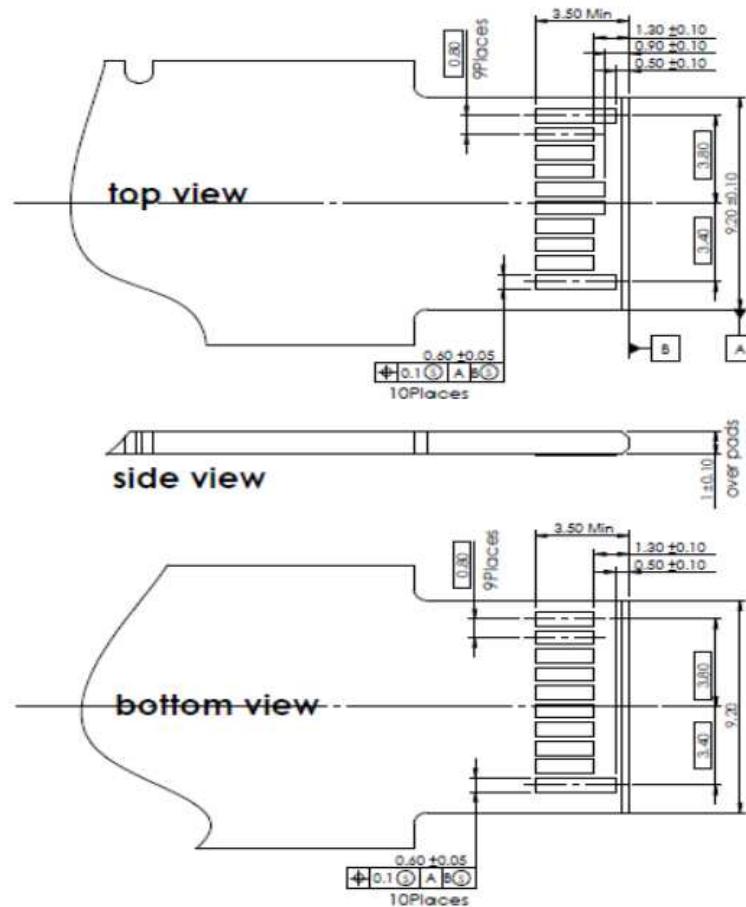

Notes:

1. When high, output indicates a laser fault of some kind either in Channel A or Channel B. The Host shall read Channel A/B for details: TX Fault from channel A if bit 2 is set in [A2H:110]; TX Fault from channel B if bit 2 is set in [B2H: 110]. Low indicates normal operation. In the low state, the output will be pulled to < 0.8V.
2. When high, this output indicates the received optical power is below the worst-case receiver sensitivity (as defined by the standard in use). Low indicates normal operation. In the low state, the output will be pulled to < 0.4V.
3. VccT VccR are the power supplies. They are defined as 3.3V ±5% at the SFP connector pin. Maximum supply current is 400mA@3.3V. Vcc may be internally connected within the SFP transceiver module.

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.

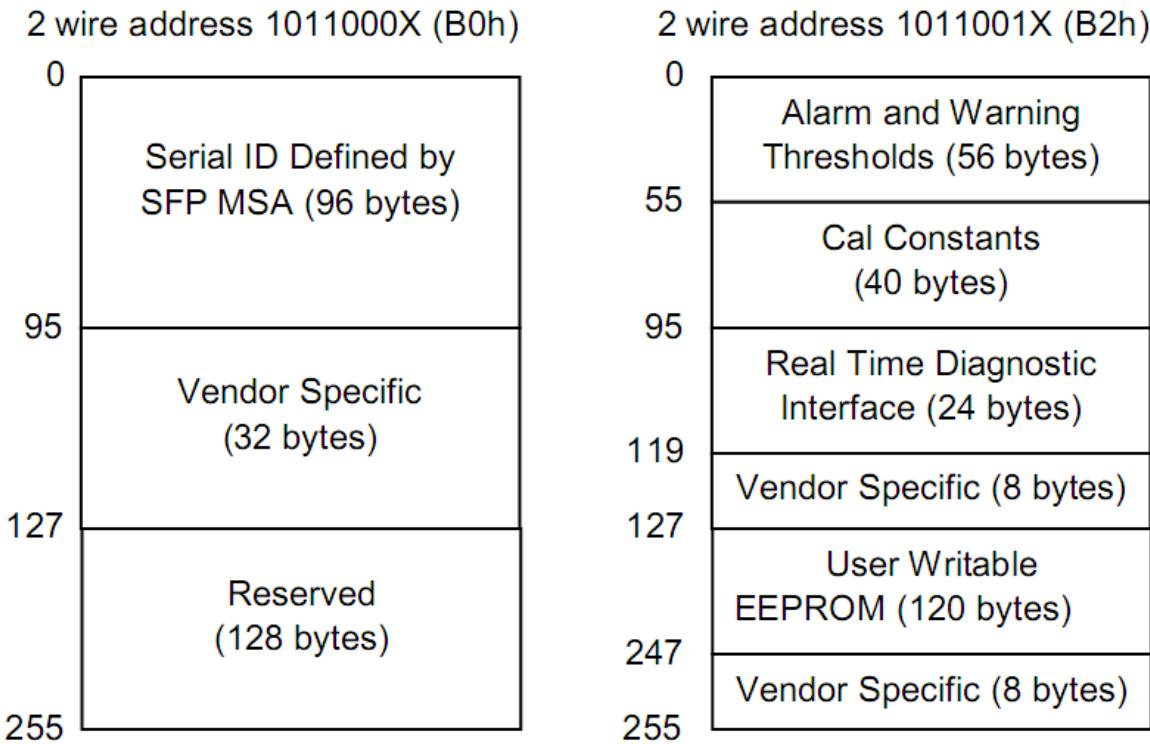

Figure 2. Digital Diagnostic Memory Map Specific Data Field Descriptions

EEPROM Serial ID Memory Contents

The CSFP MSA defines a 256-byte memory map in E2PROM that is accessible over a 2-wire serial interface at the 8 bit address 1010000X (A0h) or 1011000X(B0h). The digital diagnostic monitoring interface makes use of the 8 bit address 1010001X (A2h) or 1011001X(B2h), so the originally defined serial ID memory map remains unchanged.

Diagnostic Monitor Specifications

The operating and diagnostics information is monitored and reported by a Digital Diagnostics Transceiver Controller (DDTC) inside the transceiver, which is accessed through a 2-wire serial interface. When the serial protocol is activated, the serial clock signal (SCL, Mod Def 1) is generated by the host. The positive edge clocks data into the SFP transceiver into those segments of the E2PROM that are not write-protected. The negative edge clocks data from the SFP transceiver. The serial data signal (SDA, Mod Def 2) is bi-directional for serial data transfer. The host uses SDA in conjunction with SCL to mark the start and end of serial protocol activation. The memories are organized as a series of 8-bit data words that can be addressed individually or sequentially.
